

## PP-H 2 1/2"x1830 mm natur

Artikelnr P2201415

● Beständig ● Delvis beständig ● Ej beständig

| Kemikalie                        | Koncentration | Beständ. |
|----------------------------------|---------------|----------|
| 1,4-Dioxan                       | 100           | ●        |
| 2-Hydroxipropionsyra (mjölksyra) | 90            | ●        |
| Aceton                           | 100           | ●        |
| Ammoniak                         | —             | ●        |
| Ammoniumklorid                   | —             | ●        |
| Amylalkohol                      | —             | ●        |
| Bensen                           | —             | ●        |
| Bensin (premium)                 | —             | ●        |
| Blekningslösning                 | —             | ●        |
| Borsyra                          | 100           | ●        |
| Bromsvätska                      | —             | ●        |
| Bränsle, aromatfritt             | —             | ●        |
| Butylacetat                      | —             | ●        |
| Citronsyra                       | 10            | ●        |
| Cyklohexanon                     | 100           | ●        |
| Cyklohexen                       | 100           | ●        |
| Diesel                           | —             | ●        |
| Dietylenoxid                     | —             | ●        |
| Eldningsolja                     | —             | ●        |
| Etylacetat                       | 100           | ●        |
| Etylalkohol (etanol)             | 96            | ●        |
| Etylenklorid                     | 100           | ●        |
| Fenol, vattenl.                  | ca. 9         | ●        |
| Fluorvätesyra                    | 40            | ●        |
| Formaldehyd, vattenl.            | 40            | ●        |

| Kemikalie                          | Koncentration | Beständ. |
|------------------------------------|---------------|----------|
| Fosforsyra                         | 50            | ●        |
| Frostskyddsmedel                   | —             | ●        |
| Glycerin                           | 100           | ●        |
| Glykol                             | 100           | ●        |
| Heptan                             | 100           | ●        |
| Isopropylalkohol                   | 100           | ●        |
| Kalciumklorid                      | —             | ●        |
| Kaliumhydroxidlösning              | 50            | ●        |
| Klor (gas)                         | 100           | ●        |
| Klorbensen                         | 100           | ●        |
| Kloroform                          | —             | ●        |
| Koldisulfid                        | 100           | ●        |
| Koltetraklorid                     | —             | ●        |
| Kresol                             | —             | ●        |
| Linolja                            | —             | ●        |
| Matolja                            | —             | ●        |
| Merkurokrom                        | —             | ●        |
| Metylalkohol (metanol)             | 100           | ●        |
| Metylenklorid                      | 100           | ●        |
| Metyletylketon (MEK)               | 100           | ●        |
| Mineraloljor (aromatfria)          | —             | ●        |
| Mjölk                              | —             | ●        |
| Myrsyra                            | 10            | ●        |
| Natriumhydroxidlösning (natronlut) | 15            | ●        |
| Natriumhydroxidlösning (natronlut) | 60            | ●        |
| Natriumkarbonat, vattenl.          | —             | ●        |
| Natriumklorid, vattenl.            | —             | ●        |
| Natriumnitrat, vattenl.            | —             | ●        |
| Natriumtiosulfat                   | —             | ●        |
| Natriumvätesulfit                  | —             | ●        |
| Nitrobensen                        | —             | ●        |
| Oxalsyra                           | —             | ●        |

| Kemikalie             | Koncentration | Beständ. |
|-----------------------|---------------|----------|
| Ozon (gas)            | ≤ 0.5 ppm     | ●        |
| Paraffinolja          | 100           | ●        |
| Perkloretylen         | —             | ●        |
| Petroleumeter         | 100           | ●        |
| Propylalkohol         | —             | ●        |
| Pyridin               | —             | ●        |
| Salpetersyra          | 50            | ●        |
| Salpetersyra          | 10            | ●        |
| Saltsyra              | 10            | ●        |
| Saltsyra (konc.)      | —             | ●        |
| Silikonolja           | —             | ●        |
| Svavelsyra            | 96            | ●        |
| Tetrahydrofuran (THF) | 100           | ●        |
| Toluen                | 100           | ●        |
| Transformatorolja     | —             | ●        |
| Trikloreten           | 100           | ●        |
| Vatten                | —             | ●        |
| Väteperoxid           | 10            | ●        |
| Vätesulfid, vattenl.  | —             | ●        |
| Xylen                 | —             | ●        |
| Ättika, standard      | 5 - 10        | ●        |
| Ättiksyra             | 100           | ●        |
